

CYBERSECURITY BASICS
THAT EVERY SMB
SHOULD KNOW

01 >>>

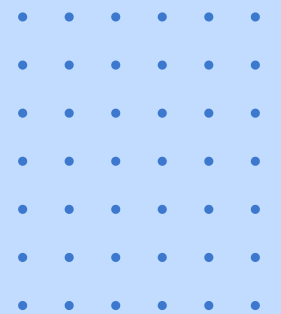

USE A PASSWORD MANAGER

BUT USE IT RIGHT....

MANY PEOPLE INSTALL PASSWORD
MANAGERS BUT DON'T ENABLE TWO-
FACTOR AUTHENTICATION (2FA) FOR
THEM.

THAT'S LIKE LOCKING YOUR FRONT DOOR BUT
LEAVING THE KEY UNDER THE MAT

02 >>>

TRAIN EMPLOYEES TO SPOT SOCIAL ENGINEERING >>>

PHISHING ISN'T JUST EMAILS—
ATTACKERS USE PHONE CALLS,
TEXTS, AND EVEN LINKEDIN
MESSAGES TO TRICK STAFF.

→ REGULAR TRAINING HELPS BUILD A
HUMAN FIREWALL.

03

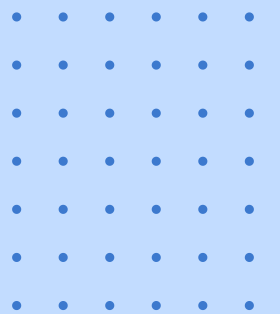

KEEP SOFTWARE AUTO-UPDATES ON

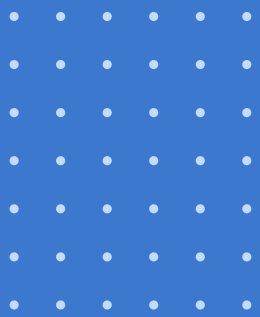

DELAYING UPDATES—EVEN FOR A FEW DAYS—CAN LEAVE SYSTEMS VULNERABLE.

→ ENABLE AUTOMATIC UPDATES FOR OPERATING SYSTEMS, BROWSERS, AND ANTIVIRUS TOOLS.

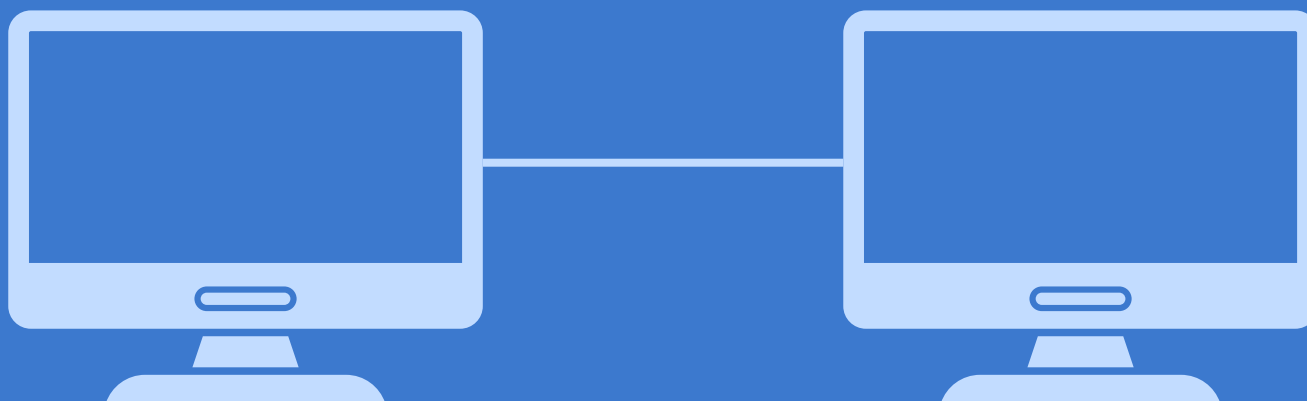

04

SEGMENT YOUR NETWORK

DON'T LET EVERY DEVICE TALK TO EVERY OTHER DEVICE. NETWORK SEGMENTATION LIMITS THE SPREAD OF MALWARE IF ONE SYSTEM GETS COMPROMISED.

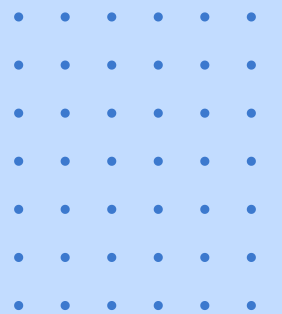

05

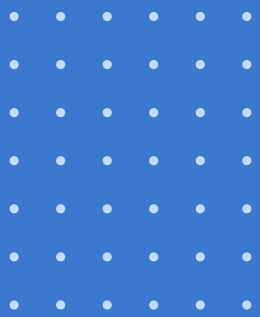

CLEAN UP OLD ACCOUNTS

FORMER EMPLOYEES' ACCOUNTS CAN BE EXPLOITED IF NOT PROPERLY DEACTIVATED. REGULARLY AUDIT USER ACCESS AND PERMISSIONS.

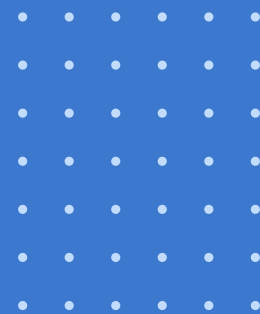

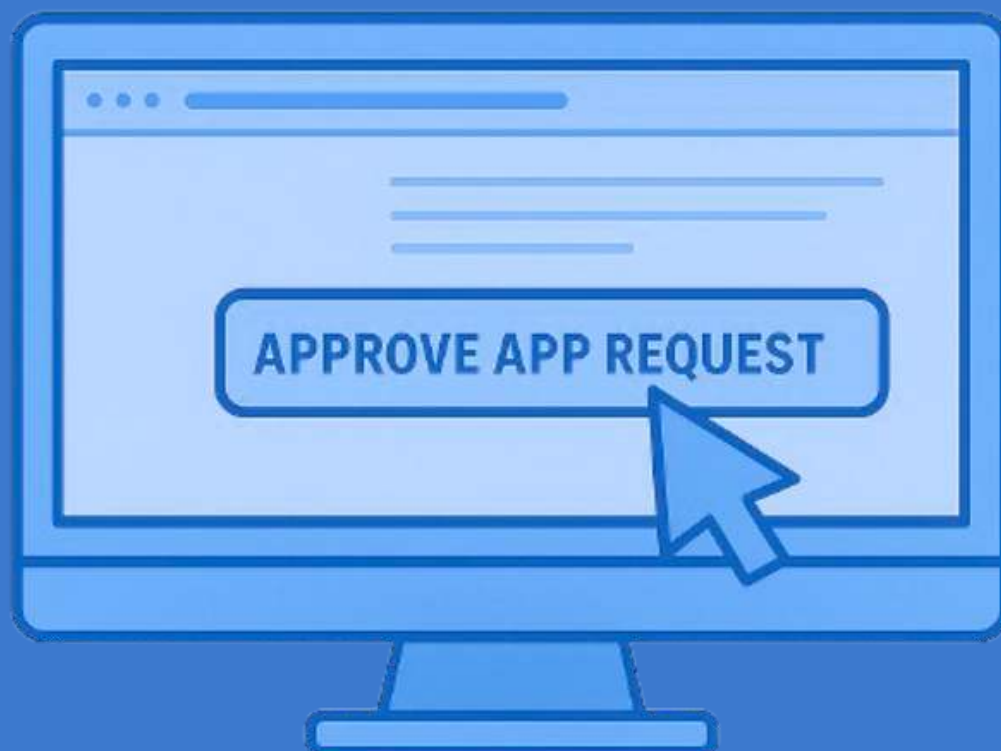

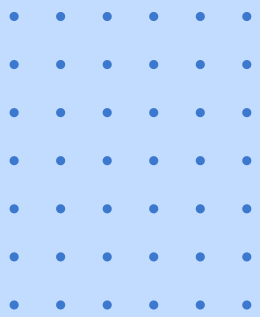

06

MONITOR SHADOW IT

EMPLOYEES OFTEN INSTALL UNAUTHORIZED APPS OR USE PERSONAL DEVICES FOR WORK. THESE CAN BYPASS SECURITY PROTOCOLS AND INTRODUCE RISKS.

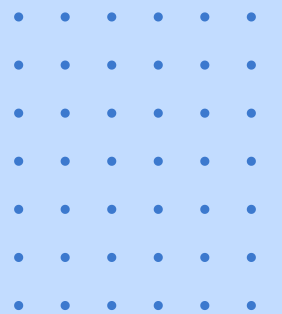

07

ENCRYPT BACKUPS

BACKING UP DATA IS GREAT—BUT IF THOSE BACKUPS AREN'T ENCRYPTED, THEY'RE VULNERABLE TO THEFT OR RANSOMWARE.

SEEM LIKE A LOT? YOU DON'T NEED TO MANAGE YOUR IT ALONE

→ YOU DIDN'T START YOUR BUSINESS
TO BECOME AN IT EXPERT.

→ STOP WASTING TIME ON TECH ISSUES
AND START FOCUSING ON GROWTH.

→ GET PEACE OF MIND WITH EXPERT
SUPPORT, PROACTIVE PLANNING, AND
REAL PROTECTION.
